INTRODUCTION

The Business Model

When you start to think about it, I mean *really think about it*, the business model of the current medical system is brilliant.

The early Rockefellers who thought it up and then had it implemented knew what they were doing when they gained control of most of the medical schools in the US in the early years of the 20th century.

The plan was to create all sorts of diseases, say with vaccines (e.g. autism, cancer, etc), fluoride, pesticides, junk "food" and the like, and then invent drugs to manage said diseases for the life of the patient, all the while getting gobs of taxpayers' hard earned dollars to pay for said drugs and management.

Never, ever, ever actually CURE any disease, as that would not be profitable, but get ever increasing increments of cash to "manage the disease" and continually "LOOK FOR" the cure.

Then get nice little old ladies and school kids with freshly baked cookies to raise money for "charity" societies, like cancer, diabetes, heart stuff of all kinds, birth defects, autism, *ad infinitum*.

Most if not all of which societies are linked to the very same corporations that helped create the diseases in the first place, e.g. cancer societies being funded by pesticide manufacturers.

Call your brand of medicine "scientific" and "evidence-based" while disparaging anything that comes from beyond the pale as "unproven" or worse, "*anecdotal*".

When someone comes along with an actual cure, disparage them, ensure their funding gets revoked (if by some miracle it happened in the first place), and *in extremis* have them imprisoned or murdered.

Hey, nothing personal. It's just business.

However, millions of people are now waking up, albeit more slowly that one would hope, although it's sometimes amazing that there are people "out there" who are still thinking for themselves at all.

And, as long as it lasts, the Internet is at your service, where everyone can do their homework. This is why the Net is under attack these days, and some countries such as the US are moving into full blown medical fascism, wherein certain medical practices such as vaccination are becoming compulsory.

The honest science just isn't there to back up corporate medicine. Never has been. And now the system is being revealed for what it is: a total scam, and a mass murdering one at that.

Which is why it's moving toward compulsion.

We deal with some of the aspects of this compulsion in this issue, and with what happened when one doctor pushed back. (She won.)

Health Freedom is a fundamental principle wherein people take responsibility for their own and their family's health, knowing that the state does not own us or our children.

It says that we are not cogs in a machine created by some business planners.

It says that our health is our birthright and it must never be sold or corrupted.

Stylish, quiet to operate, easy to clean and with a

Get your body back into balance naturally with Elanra

Have you ever wondered why walking near waterfalls or crashing waves makes you feel so invigorated? Scientists believe it's because the **air** you inhale in these environments has a high level of small negatively charged Oxygen atoms (Kruegar and Reed, 1976).

The average person inhales 10,000 litres of air every 24 hours¹ so it makes sense to breathe air that's good for your health.

See why
93% of Elanra
customers
recommend it
to their friends
and family!

It's so easy!
Simply turn it
on as you
sleep at night,
and turn it off
in the morning.

Elanra is the world's² only ioniser that produces small ingestible negative ions of Oxygen across variable frequencies. Once inhaled, this special Oxygen is passed through your lungs and into your blood stream, across variable frequencies, to enrich your health and well being in many ways.

For more information call **+61 7 5522 3789**
or visit **www.elanra.com**

ELANRA.

Elanra is TGA registered as a medical device.

Is Homeopathy a Sham?

Re NZ *Herald* article: Shelley Bridgeman: Is homeopathy a sham? 2 May 2013, included as a link in: http://www.nzherald.co.nz/lifestyle/news/article.cfm?c_id=6&objectid=11415977 in today's *Herald*.

Reader Francis' comment: "... Homeopathy should be valued for what it is worth: It will never cure cancer ...

My question: How often does chemo & radiation cure cancer?! See below:

<http://www.undergroundhealth.com/75-of-physicians-in-the-world-refuse-chemotherapy-for-themselves/>

75% of physicians in the world refuse chemotherapy for themselves. They said they wouldn't allow their family members to go through the process either!

I recall last year seeing an article with title to effect that 85% American oncologists wouldn't have the treatment they dish out to their patients at cost of many thousands of dollars and mostly tragically, often to no avail.

As a NZRN, I would NEVER have either chemo OR radiation – because those "treatments" so frequently kill. Ralph Moss wrote this and other truths years ago. His books are well worth reading, even if you don't have cancer.

I probably would have surgery, but thereafter, I know of ways to support the healing process in my body, and I would use/apply them. – Isabel H.

Cancer Information

Hi Jon and Katherine - You are most welcome to share this. References to supplies are relevant to NZ, but some things, like Lypospheric Vitamin C, and Vitamin D drops are supplied to Australia from here anyway. I don't know about doctors doing intravenous Vitamin C in Aussie but I'm sure research will find some.

I have done battle with cancer (Squamous Cell Carcinoma). At its worst, I had a lump a bit bigger than a golf ball on the side of my neck – ultrasound scans showed two cancers, one 20mmx24mmx27mm, and the second 16mmx15mmx13mm) and I have got it beaten (lump now undetectable). I have had no side effects what-so-ever from the treatment regime I undertook.

I spent many, many hours researching on

the internet and reading books.

I did not follow any conventional treatment – no radiation, no chemo, no surgery. Research on chemotherapy in particular led me to strike that from the list very early in the process. I credit much of the success to high dose intravenous Vitamin C, Vitamin D, and Artemisinin.

I would suggest as an absolute minimum, people need to cut out sugar, fried foods, anything with white flour, all processed foods, and start taking Vitamin C (Lypospheric – at least 10 sachets per day). Then follow the other protocols listed on the diet and supplements sheet. Consultation with the experts – Dr Damian Wojick (Northland Environmental Health Centre) or Integrated Health Options Auckland is essential of course.

I recommend that people read the vitamin C book - *Curing The Incurable* by Thomas Levy, an American cardiologist
<http://www.tomlevymd.com/about.html>

I consider myself to be very fortunate to have had this result, and appreciate it is not likely to be the same for everybody.

I have lots more information I have researched, including a number of books on cancer treatment and Vitamin C, and would be happy to share it, or discuss any issues with you.

With best wishes,

Chris Leitch

Dear Humans

Dear Humans: I am at the end of my rope; not even enough rope to tie a knot in and hang on. I can't seem to think clearly or even find my way home half the time, I've lost so much of my family. I'm so sad, and so ill.

I loved my job of pollinating; the smell and taste of the flowers was so good and even passed this on in my honey. The flowers don't taste good anymore; it is a foul taste they leave in my mouth. I hurt so very much that even flying is hard. I don't like to complain and would rather just do my job. Staying busy helping the crops along was so rewarding and I slept so well; not any more.

I loved you and doing things for you that no one else could or not many had the talent or was so small to be able to pollinate the flowers well.

I love you and thought you appreciated what I did for you. Yet, when I say that the poison makes me ill; you just say don't look and you won't know; you can't see it so you think it doesn't hurt me, but it does.

It hurts you also; but perhaps not as much as the smaller ones. The smaller you are, the more destructive the poison is to the life form, no matter what life form, it doesn't discriminate (when discrimination would be a good thing).

Sometimes the other bugs can become a problem, I understand once in awhile but all the time is causing problems to those of tiny stature.

I told God you would understand and you would care but so far, you just tell me to stop complaining and keep doing my job.

Wow, have I become disillusioned with the world. I thought at least you would care about your own food. I was told you were to busy to think logically; I didn't believe it. I guess I've discovered differently and been proven wrong.

To be fair, there are those that have tried; but so much against them as well. The hives that died from pesticides and herbicides were part of my family as well. Some who just had a drift of the herbicides, pesticides was all it took. Wonder if it was you that was facing genocide?

I quit, Good luck to you,

The Honey Bee

Is Your Toothpaste a Hidden Cause Of Alzheimer's?

To the Editor: I am a truck driver, and have hauled just about everything over the past 13 years. I read your site's article postulating that naturally occurring aluminum found in water might be the key to Alzheimer's disease. I'll go one better than that.

I once picked up a 44,000 pound load of aluminum dioxide powder in the aptly-named town of Bauxite, Arkansas. Noting that the destination for the load was not a processing plant or a mill, I enquired as to why this load was destined for the Colgate-Palmolive Company. The shipping agent said that the quality of bauxite (Aluminum dioxide) found in Arkansas was too low grade for manufacturing purposes, but was fine for toothpaste.

"Toothpaste?" I enquired. He then went on to explain that common white toothpaste is made largely from Aluminum Dioxide, which is a mildly abrasive, brilliantly white powder. They'll simply add a sudsing agent to make the bubbles, a flavoring agent to make it palatable, perhaps a food coloring agent, some water, and presto – toothpaste.

Go read the ingredients on your tube of toothpaste. It'll list one or two 'active ingredients'...notice the combined total amounts of "active ingredients" is usually less than 1%. What about the other 99%?

- Were you aware that every day of your life, you are filling your mouth with a gob of nearly pure aluminum dioxide?

- Can you imagine the possible health effects?

- Do you see how this could be the number one entry point for aluminum to enter the body?

- Can you guess why the inactive ingredients aren't listed?

- Imagine the outcry from all the millions of health conscious Americans who suddenly discovered that they are being poisoned!

- Yes, that's why they aren't listed.

So, if you and your vast readership are concerned about getting too much aluminum in their diets, you can all relax about naturally occurring aluminum in the water, or cooking with pots and pans. These are trivial sources of aluminum compared with the several pounds of aluminum directly swallowed or absorbed through the tissues while brushing our teeth.

On the bright side, we can all still have a beautiful smile in our old age, if only we can remember how to smile.

KT Feller
(Original letter from www.rense.com)

Hi Jon and Katherine

Vaccines and Autism

Editors: I was totally stunned when one of the early speakers, Karen Kain, shockingly said, "...The Center for Disease Control announced last year (2014) that 1 in 68 children has autism. But the true statistics extrapolated out is 1 in 18 of 2-year olds has autism. We as a people should be outraged. And if we do nothing, by 2025 1 in 2 of our children will have autism. When there is risk, there must be choice..."

Karen Kain's dire predictions mirror my own projections, which are a little worse based on current statistics, where I predict that by about 2020 (only 5 years away) almost all young vaccinated children will have autism and be effectively brain-damaged. These shocking statistics were taken from www.VACC-ceptableinjuries.co and are published on <http://www.vaccinationinformation-network.com/to-vaccinate-or-not/> and show the spectacular increase in autism 1970 through to 2013. The rate of autism in 1970 was 1 in 10,000, 1975: 1 in 5000, 1985 1 in 2,500, 1995: 1 in 500, 2001:

1 in 250, 2004: 1 in 166, 2007: 1 in 150, 2009: 1 in 110, 2012: 1 in 88, 2013: 1 in 50, 2014: ? If you extrapolate out this rapid rate of increase now you get: 2014: 1 in 30, 2015: 1 in 16, 2016: 1 in 9, 2017: 1 in 5, 2018: 1 in 3, 2019: 1 in 2, 2020: virtually 100% of all vaccinated children will have autism. Can you imagine? Every child born after 2020 who is vaccinated, effectively will be a brain damaged?

Please watch the recent 2-hour YouTube clip below of California Coalition for Health Choice Rally at the Californian State Capitol in Sacramento on April 8, 2015. Simply mind boggling!!!! <https://www.youtube.com/watch?v=23hLOHQ7r4o>

- Full Name Supplied

Fluoride

Hi Jon and Katherine:
Just had a great idea!
People who want fluoride can go get one of these bags of it any time they want and pop a teaspoon in a glass of water with their morning coffee. [Ed note: This would be a fatal dose; the writer is being facetious.]

ing facetious.]

But, for those who don't however want a level 6 bio toxin in their water, clothes, hair, skin, bloodstream, bones, food, showers and baths, they have to buy whole house filtration systems that can cost tens of thousands of dollars.

So even if they didn't want it, most couldn't afford to get it out.

You need a two micron filter set which is the same you need to filter out uranium. These filters are very expensive. Activated alumina-based filters remove fluoride but may significantly increase the aluminum content of the water.

And this is of course removes only the fluoride in their own home at best.

So everywhere else they go is basically contaminated with it and they can't do anything about it.

Are you in other parts of New Zealand
and interested in trying?

Let us know so we can plan events
with you in mind.

The bedroom is the most important room to keep free of health burdens and sources of irritation for the body because this is where we are supposed to rest and regenerate. In the quest to create the healthiest sleeping environment, Geovital – Academy of Radiation Protection and Environmental Medicine quickly realised mattresses were a big problem. 600 Different types were tested and all failed to meet the Academies criteria. So... we have been making our own patented mattresses since 1984 and at prices anyone can afford.

Our mattresses are very different:

- **Stretch-Effect:** Downward pressure is converted in a gentle traction reducing pressure in the spine to aid regeneration.
- **Metal-Free:** Metal attracts radiation from transmitters and propagates electric field radiation from internal wiring.
- **Latex-Free:** Far beyond Allergy testing, is intolerance testing. We found Latex to be the worst and causes intolerance reactions in most people.
- **Anti-Static:** Most mattresses build up a static charge which is not good for you.
- **Toxin-Free:** Instead of using chemical propellants in the production as other manufacturers do, we use toxin free processes.

- **High air permeability:** Most mattress materials are like plastic bags sealing off 1/3 of your skin. Our foam and design allow much airflow. Making it inhospitable to fungus and bacteria and bringing great oxygenation to the skin.
- **Removable and Washable outer cover:** Renew your mattress whenever you feel like it.

Also optionally available with total customisation to your body size and shape.

THE NATURAL THERAPY MATTRESS WITH STRETCH EFFECT

After testing 600 different mattress types, none of which meet the Academies criteria, we started making our own at prices anyone can afford.

VIDEO: Our approach and mattress design:
<http://youtu.be/6w1U7jQ0rm0>

**With reasonable prices you can't afford not to
sleep on a mattress that supports your health.**

Better Health on a Shoestring

By Katherine Smith, Editor

Are you getting enough vitamin D?

Although we use the term “vitamin D”, technically it would be more correct to call vitamin D a “prohormone”.

Vitamin D is synthesised when bare skin (no sunscreen!) is exposed to sunlight – that is, the sort of sunshine you get in the open air, *not sunlight that has been filtered through glass*. If you have fair skin, sitting, lying or walking outside around midday in the summer for about 10-15 minutes in shorts and a T-shirt will provide enough skin surface and ultra-violet light exposure to synthesise the equivalent of 10,000 -25,000 I.U. of vitamin D. If you have darker skin, a longer exposure is required – potentially as long as a two hours depending on the amount of melanin in your skin.

Your shadow

As a general rule, if your shadow is longer than you are tall, the amount of ultraviolet B rays that are reaching your skin are not sufficient to promote vitamin D synthesis.

At times like this, the body draws on its stores of vitamin D, as most foods contain only low levels of the vitamin, compared to what your body can synthesise in response to sunlight exposure. Even the best food sources of vitamin D, (eg oily fish) contain only around 500 I.U. per 100g serving – compared to the 10,000 I.U. or more that can be produced from enjoying some time outside in the sunshine. Cod liver oil (which was traditionally used to supplement children's diets in order to prevent “rickets” in which the

counter, and in NZ, a doctor can prescribe 50,000 I.U. prescription vitamin D tablets (“Cal D Forte”) which is a useful and low cost way of ensuring that vitamin D levels remain adequate over the winter months. (NB: These tablets look and taste like miniature “smarties” so please keep them out of reach of children as too much vitamin D can be toxic.)

A doctor can also order a blood test for vitamin D; however as the patient you may need to pay for the test as it may not be subsidised. The Vitamin D Council suggests a target vitamin D level of 50 nmol/L (20 ng/ml) whereas the NZ Best Practice Advisory Centre suggests it should be 50-100 nmol/L.

Taking the time to enjoy the sunshine and/or taking some supplementary

“However, in the colder months when more clothing is needed and the sun's rays are weaker it may be impossible to meet vitamin D needs through sun exposure alone.”

NOTE: There is no need to get sun-burned in order to get a daily ration of vitamin D; the vitamin will be synthesised prior to the skin's becoming reddened.

Vitamin D synthesis is dependent on the amount of ultraviolet B that reaches the part of the planet where you reside and this depends on the latitude and the season. People who live near the equator should have no trouble meeting their vitamin D requirements through sun exposure all year around – unless their employment situation, culture or other medical conditions preclude them from being able to expose sufficient amounts of their skin to the sunlight for enough time. (If this is the case, then vitamin D supplements would be beneficial.)

In many parts of the world, unless there are lifestyle or medical reasons that prevent people from enjoying some time in the sunshine with at least their arms and legs exposed, people should be able to meet their vitamin D needs through sunshine exposure in the summer. However, in the colder months when more clothing is needed and the sun's rays are weaker it may be impossible to meet vitamin D needs through sun exposure alone.

bones soften due to the body's being unable to properly use calcium in the absence of sufficient vitamin D) contains vitamin A and about 1,300 I.U. of vitamin D per tablespoon.

(Vitamin D and A levels in cod liver oil may vary and thus it is important to buy a brand that has been tested for contaminants and contains the natural vitamins as some products contain added synthetic vitamins. Moreover, professional advice regarding an appropriate dose of cod liver oil should be obtained for children. Babies and young children should not be expected to drink any sort of oil from a spoon since they could accidentally inhale it and develop aspiration pneumonia.)

Due to the low levels of vitamin D in most modern diets, if you rely on stored vitamin D alone, you risk becoming vitamin D deficient by late winter or early spring (if not earlier). It is probably no coincidence that this time of the year is one of the prime times for respiratory illness as adequate vitamin D levels are necessary to synthesise antimicrobial peptides which help the body resist infection. Fortunately, both cod liver oil and vitamin D3 supplements are available over the

vitamin D can pay great benefits in terms of health. Studies document a reduced risk of many cancers, including ovarian, breast, colon and prostate cancers in people with adequate vitamin D levels. (See: <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1470481/>) Resistance to infection is enhanced with sufficient vitamin D as evidenced by trials that show lower respiratory infections in people taking supplements. (See: <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3543548/>) Autoimmune diseases are more common in people with low vitamin D levels. (See: <http://www.ncbi.nlm.nih.gov/pubmed/23238772>) A lot of information about vitamin D (in a user-friendly format) may be found at <https://www.vitaminCouncil.org/>

New Zealand journalist Ian Wishart has also written a book on vitamin D called **Vitamin D: Is this the Miracle Vitamin?** For information about this book and some interviews with Ian Wishart, please see this link <http://www.investigatormagazine.co.nz/Investigate/2998/vitamin-d-the-new-book-that-could-save-your-life-literarily/>

Kiwi Green Health Supplements

Green Barley

This concentrated, organic nutrient is loaded with energy, feeds the cells, and boosts the immune system. Green barley leaves are 40% protein and contain one of the broadest spectrums of amino acids available from any plant.

Available in three sizes: **1kg \$69.00, 200g \$25.00, and 100g \$13.00**

Xylitol Natural Sweetener

100% natural substitute for Sugar. Xylitol tastes and looks like sugar, but while sugar wreaks havoc on the body, Xylitol may assist the body to heal and repair. Derived naturally from corn.

Available in two sizes: **2kg \$47.00 & 500g \$18.00**

Vitamin C Powder

Boost your immune system with this water-soluble Vitamin C powder. Helps to ward off flu and colds, and fights infections. Vitamin C may support the cardiovascular system by facilitating fat metabolism and protecting tissues from free radical damage.

Available in two sizes: **600g \$46.00, and 300g \$23.00**

Charcoal Powder

A natural detoxifier, charcoal powder can absorb thousands of times its own weight in metals, poisons, chemicals. An ideal remedy for diarrhoea, flatulence, food poisoning, and gastrointestinal infections.

Available in two sizes: **1kg \$59.00, and 150g \$18.00**

FDA Pushing To Regulate Homeopathy “Out of Existence”

March 30, 2015

By Dr. Martha Grout, MD, MD(H)

Why is there a sudden push by the FDA to label homeopathic remedies as dangerous? Why is there a need to regulate substances that have been used for hundreds of years without any issues? What does the FDA have to gain?

The FDA has published two documents recently, which suggest that WAR is being declared on the profession of homeopathic medicine – or at least on the manufacture of homeopathic remedies, which comes to the same thing in the end. What is a homeopath without homeopathic remedies?

On March 19, 2015 the FDA published an advisory (called a “safety alert”) about homeopathic asthma OTC medications, recommending that patients be wary, and that health care practitioners be sure to report any adverse effects to the FDA. Here is the link to that safety alert: <http://www.fda.gov/Safety/MedWatch/SafetyInformation/SafetyAlertsforHumanMedicalProducts/ucm439014.htm>

The FDA has since that date scheduled public hearings on:

“...the current use of human drug and biological products labeled as homeopathic, as well as the Agency’s regulatory framework for such products. These products include prescription drugs and biological products labeled as homeopathic and over-the-counter (OTC) drugs labeled as homeopathic.”

Here is the link to the document which was published on March 27, 2015 – not even 10 days after the March 19th safety alert. <https://www.federalregister.gov/articles/2015/03/27/2015-07018/homeopathic-product-regulation-evaluating-the-food-and-drug-administrations-regulatory-framework>

The date of the hearings is set for April 20 and 21, 2015, from 9 a.m. to 4 p.m. That is three weeks from first publication of the announcement.

What’s the rush? Homeopathic remedies have been in use since they were first introduced to the United States in 1925 by Dr. Hans Burch Gram. Textbooks by the founder of Homeopathy, Samuel Hahnemann, were available, but only in German until 1835. The practice of homeopathy spread throughout the USA because doctors found it to be so much more effective in their complex and unresolved medical cases. Homeopathic medicines have been accepted in the Homeopathic Pharmacopeia of the United States (HPUS) and regulated under a docu-

ment called CPG Sec. 400.400, “Conditions Under Which Homeopathic Drugs May be Marketed”. These conditions have been unchanged for the last forty years.

Why, suddenly now, are we wanting to change the manufacture of these remedies? Why such a push to label homeopathic remedies dangerous, when they have been around for over 200 years without any problems?

Cui bono? The Merriam-Webster online dictionary defines this phrase: “a principle that probable responsibility for an act or event lies with one having something to gain”. Who stands to gain from destroying the manufacturers of homeopathic remedies?

A sentence in the most recent version of the 400.400 document with regards to FDA regulation of homeopathic medicine may provide a clue.

“Until recently, homeopathic drugs have been marketed on a limited scale by a few manufacturers who have been in business for many years and have predominantly served the needs of a limited number of licensed practitioners... Today the homeopathic drug market has grown to become a multimillion dollar industry in the United States, with a significant increase shown in the importation and domestic marketing of homeopathic drug products.”

“FDA pushing to regulate homeopathic medicine out of existence”

This document, outlining the conditions under which homeopathic drugs may be marketed, is undated, and was downloaded on 03-26-15. <http://www.fda.gov/ICECI/ComplianceManuals/CompliancePolicyGuidanceManual/ucm074360.htm>

In 2013, IBISWorld estimated revenue from homeopathic medicines of \$363 million with an annual growth rate projected at 7%. <http://www.ibisworld.com/industry/homeopaths.html>

In 2015, Vox Media wrote that Americans spend \$3 billion on homeopathy. Curiously, that article also concluded that Americans were wasting their money on ineffective treatments. <http://www.vox.com/2015/3/11/8190427/homeopathy>

In Australia, the National Health and Medical Research Council published their findings on the lack of efficacy of homeopathy in March 2015. https://www.nhmrc.gov.au/_files_nhmrc/publications/attachments/ca-m02a_information_paper.pdf (You can read a critique of this document at this link: <http://www.naturalmedicine.net.nz/news/homeopathy-in-the-news/-> Ed)

They just released a statement re-iterating the ineffectiveness of homeopathy on March 15th, just in time for the FDA’s release of the advisory on homeopathics used to treat chronic asthma. <https://www.nhmrc.gov.au/media/releases/2015/nhmrc-releases-state->

ment-and-advice-homeopathy

The President of the Australian Homeopathic Association noted the political and non-scientific nature of the attack in a document available online: http://www.homeopathyoz.org/images/news/Open_response_letter_by_AHA_to_NHMRC.pdf

The letter from the AHA states in part: “We urged the Council to correct this ill-considered stance [from a position paper leaked in 2011 12 months before the report was published, that it would be “unethical for medical practitioners to treat patients using homeopathy” because homeopathy “has been shown not to be efficacious”], which revealed a disregard for the principles of empirical scientific research and a subsequent abuse of the power and influence of Australia’s leading medical science research organization [stet] in relation to homeopathy.”

It is to be noted that their National Health Minister, Sussan Ley, declared that as of March 2015 the Australian National Health Service would continue to provide coverage for homeopathic treatments in Australia. <https://www.huntergpa.org/news/sussan-ley-holds-fire-on-rebates-for-useless-natural-therapies>

So what is so bad about energized water? Why such a huge flap? Does this not seem like a massive over-reaction, an abreaction to something that seems on the face of it to be considered either innocuous or ineffective? Why are they branding it as dangerous, if it’s just energized water?

People can choose where they wish to spend their money. If they choose something that is not harmful, and that may provide benefit, why should that substance be regulated out of existence? What is not being said? What is being implied without ever actually coming out and stating it?

So... is this just a blip on the radar? Or are we at war? Of course, war has not been declared. But in the opinion of many in the homeopathic community, it would behoove us to prepare.

ABOUT THE AUTHOR

Martha M Grout, MD, MD(H) graduated from Radcliffe College (Harvard University) and received her medical degree from the Medical College of Pennsylvania. She did a residency in Emergency Medicine at that same institution (one of the first in the country) and became board certified at the first examination in 1980. She spent the next many years doing conventional allopathic Emergency Medicine. She began training in Environmental Medicine and acupuncture in 1997, having reached a clear understanding that without a healthy environment, there is no health of the population or of the individual. The government knows it's a medical killing machine

It turns out that the informational pipeline that feeds the entire perception of pharmaceutical medicine is a rank fraud.

By Jon Rappoport

October 5, 2013

Here are four smoking guns that substantiate the title of this article.

Smoking gun #1: As I detailed in my two previous articles, Dr. Barbara Starfield's article in the July 26, 2000, *Journal of the American Medical Association*, "Is US Health Really the Best in the World?", spelled out the damage:

The US medical system kills 225,000 Americans per year. That's well over two MILLION deaths per decade.

The US government supports, in numerous ways, this system. And now, through the implementation of Obamacare, many more previously uninsured Americans will enter the killing fields.

Dr. Starfield's data are not classified. They're not a state secret. Any doctor or medical bureaucrat has access to them.

Yet nothing of note is being done to remedy the ongoing crime.

Smoking gun #2: Starfield's report indicated that, every year in the US, 106,000 Americans die as a result of FDA-approved medical drugs.

The FDA is the only agency tasked with certifying these drugs as safe and effective. With such certification, the drugs enter the public pipeline.

On the FDA's own website, under the heading, "Why Learn About Adverse Drug Reactions," appears the following text: "Over 2 MILLION ADRs [Adverse Drug Reactions] yearly; 100,000 DEATHS yearly; ADRs 4th leading cause of death..."

Astonishingly, the FDA takes no responsibility for any of this. They, and only they, can approve the drugs as safe and effective. They list the numbers of deaths and maimings, and they never admit culpability.

Smoking gun #3: It's common knowledge that there is a revolving door between the FDA and drug companies. Employees come and go from one organization/agency to another. The FDA and the pharmaceutical industry are, in significant respects, partners.

For years, there were reports of payoffs and pressure, at the FDA, to grant approval to drugs that were, in fact, harmful and dangerous.

Then, in 2009 and again in July 2012, a scandal erupted. As Truthout reported, it focused on "an institutionalized FDA spying program on its own scientists, law makers, reporters and academics that included an enemies list..."

At the heart of the scandal: FDA pressure on its own people to approve medical devices that were dangerous. Truthout took a further step. It interviewed Ronald Cavanagh, a former drug reviewer for the FDA. (July 29, 2012, "Former FDA Reviewer Speaks Out About Intimidation and Marginalizing of Safety")

In a stunning interview with Truthout's Martha Rosenberg, Cavanagh, exposed the FDA as a relentless criminal mafia protecting its client, Big Pharma, with a host of mob strategies.

Cavanagh: "...widespread racketeering, including witness tampering and witness retaliation."

"I was threatened with prison."

"One [FDA] manager threatened my children...I was afraid that I could be killed for talking to Congress and criminal investigators."

Cavanagh reviewed new drug applications made to the FDA by pharmaceutical companies. He was one of the holdouts at the Agency, who insisted that the drugs had to be safe and effective before being released to the public. That's why he was under the gun.

Honest appraisal wasn't part of the FDA culture, and Cavanagh swam against the tide, until he realized his life and the life of his children might be on the line.

What was his secret and unofficial task at the FDA supposed to be? "Drug reviewers were clearly told not to question drug companies and that our job was to approve drugs." In other words, rubber stamp them. To say the drugs were safe and effective when they were not.

Cavanagh's revelations are astonishing. He recalls a meeting where a drug-company representative flat-out stated that his company had paid the FDA for a new-drug approval. Paid for it. As in bribe.

Cavanagh remarks that the drug pyridostigmine, given to US troops to prevent the later effects of nerve gas, "actually increased the lethality" of certain nerve agents.

Cavanagh recalls being given records of safety data on a drug

"The US medical system kills 225,000 Americans per year. That's well over two MILLION deaths per decade."

that was up for approval – and then his bosses told him which sections not to read. Obviously, they knew the drug was dangerous and they knew exactly where, in the reports, that fact would be revealed.

The FDA is an ongoing criminal enterprise, and any government official, serving in any capacity, who has become aware of it and has not taken action, is an accessory to mass poisoning of the population.

Smoking gun #4: Before the FDA considers approving a new drug, studies and clinical trials have to be done. The drug companies do those clinical trials and submit the results to the FDA.

Obviously, the results look good; otherwise the FDA wouldn't be able to certify the drugs as safe and effective.

www.drug-education.info/documents/iatrogenic.pdf

This raises the specter of research fraud – because, since the drugs kill 106,000 Americans every year, how can published studies praising these drugs be authentic and credible?

On January 15, 2009, the *NY Review of Books* published a devastating quote from a woman who, for 20 years, edited the most prestigious medical journal in the world:

"It is simply no longer possible to believe much of the clinical research that is published, or to rely on the judgment of trusted physicians or authoritative medical guidelines. I take no pleas-

ure in this conclusion, which I reached slowly and reluctantly over my two decades as an editor of *The New England Journal of Medicine*."

(Marcia Angell, MD, "Drug Companies and Doctors: A story of Corruption." *NY Review of Books*, Jan. 15, 2009.)

Here is another quote of a similar nature, also published in the *NY Review of Books* (May 12, 2001, Helen Epstein, "Flu Warning: Beware of Drug Companies"):

"Six years ago, John Ioannidis, a professor of epidemiology at the University of Ioannina School of Medicine in Greece, found that nearly half of published articles in scientific journals contained findings that were false."

Here's another quote from the same:

"Last year, GlaxoSmithKline's diabetes drug Avandia was linked to thousands of heart attacks, and earlier in the decade, the company's antidepressant Paxil was discovered to exacerbate the risk of suicide in young people. Merck's painkiller Vioxx was also linked to thousands of heart disease deaths. In each case, the scientific literature gave little hint of these dangers."

And finally, here is yet another statement from Marcia Angell, former editor of *The New England Journal of Medicine*:

"A review of seventy-four clinical trials of antidepressants, for example, found that thirty-seven of thirty-eight positive studies [that praised the drugs] were published. But of the thirty-six negative studies, thirty-three were either not published or published in a form that conveyed a positive outcome."

It turns out that the informational pipeline that feeds the entire perception of pharmaceutical medicine is a rank fraud.

Could any major newspaper add up these quotes and launch an all-out attack on the massive crimes surrounding medical studies? Of course. And that attack, if carried out long enough, would shake the pillars of the Church of Modern Medicine. But it doesn't happen.

Neither do we see extensive Congressional hearings on the horrendous effects of the US medical system. The Dept. of Justice does nothing, when they should be making mass arrests and laying on criminal prosecutions.

They know the scope of the medical killings and maimings. They choose to do nothing.

And now, into the maw of this dragon of death, will step millions of previously uninsured Americans, glad recipients of Obamacare.

FORCED VACCINATION AT GUNPOINT

By Mike Adams, Health Ranger

In 2007, following the State of Maryland's threats against parents who refuse to have their children vaccinated, children were herded into a Prince George County courthouse being guarded by armed personnel with attack dogs. Inside, the children were forcibly vaccinated, many against their will, under orders from the State Attorney General, various State Judges and the local School Board Director, all of whom illegally conspired to threaten parents with imprisonment if they did not submit their children to vaccinations.

The State of Maryland has now turned to Gestapo tactics to force its medical will upon the People, stripping parents of any right to decide how they wish to protect their own children from infectious disease. Health authorities there have already announced their intent to essentially kidnap parents and throw them in jail, removing them from their children for up to thirty days if they continue to refuse to have their children vaccinated. This will all be conducted at gunpoint, with armed personnel and attack dogs at the ready, making sure nobody steps out of line, and suppressing any attempt at public dissent against the Orwellian vaccination policies.

The entire campaign against these parents is blatantly illegal. *There is no law in Maryland requiring the vaccination of children, thus parents who refuse to do so may not be legally charged with violating any law.* Instead, Maryland health and school authorities are using Gestapo-like tactics, threatening to charge the parents with child truancy violations, criminalizing them for daring to protect their children from the dangerous chemicals found in vaccines (including mercury based preservatives and/or aluminium based adjuvants, to name just a couple - Ed.)

The desperation of organised medicine is becoming increasingly apparent

As more and more parents are becoming informed about the dangers of vaccinations and their link to autism, state health authorities are increasingly turning to "Gunpoint Medicine" to force the People to submit to the poisons of conventional medicine. Parents who attempt to save

their children from deadly chemotherapy chemicals are being arrested and having their children kidnapped by Child Protective Services (http://www.naturalnews.com/020001_cancer_industry_Abraham_Cherrix.html), and oncologists who used to be armed only with radiation machines and chemotherapy injectors and now arming themselves with U.S. Marshals and other local law enforcement authorities who are using loaded firearms to enforce "the will of the State" against parents who resist.

Even the American Association of Physicians and Surgeons (AAPS) announced its strong opposition to the Maryland "Gunpoint Medicine" vaccination campaign. In a press release published Nov. 16, the AAPS states:

The Association of American Physicians and Surgeons today condemned the "vaccine roundup" executed in Prince George's county Maryland this week, and promised to do everything it can to support parents who refuse to immunize their children.

"This power play obliterates informed consent and parental rights," said Kathryn Serkes, director of policy for the Association of American Physicians and Surgeons (AAPS), one of the few national physician groups that refuse corporate funding from pharmaceutical companies.

In a scenario reminiscent of cattle roundups, the state's attorney has issued summons to more than 1600 parents of children who have not provided certificates of immunization for their children. But instead of toting a cattle prod, this state's attorney chooses to wield a syringe to keep the "herd" in line.

Gunpoint Medicine: Why drug pushers must now rely on Gestapo tactics

Conventional (pharmaceutical) medicine is the only system of medicine in the world that is so unpopular with informed consumers that it must be administered at the barrel of a gun. There is no other system of medicine anywhere in the world that resorts to such tactics to recruit patients.

At the Nov. 17th event in Maryland, activists Jim Moody and Kelly Ann Davis from SafeMinds (www.SafeMinds.org) were able to get in front of TV news cameras and voice their opposition to the coerced vaccination policy. Yet, amazingly, most parents just lined up like cattle ready to be branded, not bothering to question the sanity or legality of the very system in which they were now agreeing to participate.

What's next for Gunpoint Medicine?

As the truth continues to emerge about the extreme dangers of vaccinations and pharmaceuticals, Big Pharma is becoming increasingly desperate to coerce the public into relying on its products. It is now working closely with state authorities (including Governors of several states) to mandate the use of vaccinations on young children. This results in the criminalization of parents who refuse to subject their children to these dangerous chemicals.

In effect, Big Pharma is hoping to turn natural health followers into criminals.

The FDA has already criminalized nutritional supplement companies who dare to tell the truth about the health benefits of their supplements. (Read the true history of armed FDA raids on vitamin companies here: <http://www.NaturalNews.com/021791.html>)

Next, parents who refuse to subject their children to the chemical pharmaceuticals proposed by Big Pharma will be criminalized, rounded up and incarcerated for "refusing to comply with public health policy." This is all being done by the State in the name of "protecting the children" from their own parents' naturally healthy lifestyles. (Insane, isn't it, to think that protecting your child from toxic chemicals is now a criminal act in the United States?)

The end game of all this is to apply Gunpoint Medicine tactics to everyone: Adults and senior citizens included. Anyone suffering from high cholesterol, for example, who does not submit to Big Pharma's statin drugs could be arrested, strapped to a table and medicated

against their will. People with cancer could be arrested for choosing to treat that cancer with safe and effective botanical medicines instead of patented, high-profit Big Pharma drugs. If you think the prisons are full enough right now from all the arrests for cannabis possession and other victimless crimes, just wait until the State starts arresting all the natural health moms and dads across the country who refuse to participate in the utterly insane and extremely harmful system of medicine that now dominates U.S. health care today.

The State is very clear about medicine: If you want to remain a free citizen, you must submit to the synthetic drugs made by the very same corporations that now control government health regulators. Any person who resists such "treatments" will be branded a threat to public health – a designation just beneath "terrorist" in the eyes of many government bureaucrats. As such, they believe there is no limit to the level of force they may use to coerce such people into submitting to Big Pharma's chemicals. Today, it's armed guards with attack dogs. Tomorrow, it might be water boarding or other torture methods. Think that's impossible? Think again: Just five years ago, nobody in their right mind would have thought that parents who did not want to get their children vaccinated could end up in prison, their children kidnapped by state authorities and forced to subject themselves to dangerous chemical injections at gunpoint.

Yet that is precisely what is happening right now in the state of Maryland. It happened on Saturday, in fact.

Where is the outrage?

What's most interesting about this issue of using the threat of imprisonment to force vaccinations upon children is not necessarily who is speaking out against it, but who has chosen to remain silent.

The American Medical Association, for example, has said nothing in opposition to the policy. Neither has the Food and Drug Administration. Where is the outrage from the Maryland Hospital Association? None of these organizations seem to have a problem with Gunpoint Medicine. The idea of rounding up parents and coercing their children into receiving injections of toxic chemicals does not seem to bother these organizations. And why should it? All of these organizations are closely tied to Big Pharma. They're all in favor of vaccinations for all, it seems, and I have no doubt that some individuals in these organizations (especially the AMA) are strongly in favor of the Gunpoint Medicine coerced vaccination policy being played out in Maryland right now.

Organized medicine believes the People are too stupid to be allowed to make their own health decisions. Bureaucrats and physicians should be the ones making these decisions, we're told, and any person who disagrees with such decisions should be labeled a criminal, arrested

and prosecuted. This is no exaggeration. It is, in fact, a shockingly accurate description of Maryland's current vaccination policy.

It wasn't too long ago that Americans would have stood up and rallied against this kind of medical tyranny. The major news networks would have denounced Maryland's vaccination policy with strong language and harsh accusations. People would have been marching in the streets, demanding their health freedom. But today, it's a different America. The People are drugged up on pharmaceuticals and dosed on fluoride. They're too intoxicated to think straight, and they're frightened into submission by a fear-based government that invokes domestic tyranny at every opportunity to control and manipulate the People into doing whatever it wants.

The "free" America we all once knew is long gone, and it has been replaced with The United States of Corporate America, where police tactics are now used to enforce hazardous public health policies, and the people who run the State no longer think there's anything wrong with rounding up the population at gunpoint and performing large-scale medical experiments on their children. That's what modern vaccines are, after all: A grand medical experiment whose effects will only become known after a generation of mass poisoning has come and gone.

Compulsory (forced) Vaccination Bills: 110 bills across 36 States in US in 2015

110 Bills, 36 states: Sample bills:

- Eliminates the personal belief exemption in California
- Eliminates the religious belief exemption to vaccination in Maryland
- Eliminates the religious belief exemption
- Eliminates both the religious and philosophical belief exemptions in VT
- Requires all school students, teachers, administrators, and staff members to be fully vaccinated
- Allows pharmacists to administer any vaccine to minors 14 and older without parental consent

HPV Vaccines for minors without parental consent or knowledge

- Allows minors 14 and older in the Texas Juvenile Justice System to consent to

vaccination

- Prohibits day care providers from hiring anyone who has not been vaccinated with three vaccines
- Requires health care providers be vaccinated for flu
- Mandates all college students living in on-campus housing be vaccinated for meningococcal disease
- Expands police powers to detain individuals suspected of exposure to communicable diseases
- Requires notarization and education for religious belief exemptions
- Requires physician counseling for conscientious and religious belief exemption
- Severely restricts religious exemption to vaccine mandates
- Restricts the religious exemption to vaccination by changing the language

- Provides liability protections to dentists who administer vaccines
- Allows disclosure of a patient's immunization record without the patient's authorization
- Requires doctor certification for parents using a personal belief exemptions for school/child care
- Requires parents receive a letter from the principal if there is a nonvaccinated child in attendance
- Requires schools provide information on HPV vaccines in any course in sexual education

"I put it on my back and shoulders every night...after a lifetime of insomnia, I've never slept like this and the pot is now treated like it's pure gold"—Tracey (NZ)

The war against vaccine-refusers

By Katherine Smith, Editor

Make no mistake, there is a war hotting up against people, who for want of a better name I will call “vaccine-refusers” – people who choose not to be vaccinated (or allow their children to be vaccinated) or people who may agree to one or more vaccinations but don’t want to have every new vaccine that Big Pharma brings to market injected into them or their children.

In Australia, Prime Minister Tony Abbott recent announcement that the government planned to remove the “conscientious objection” category from vaccination exemptions from January 1, 2016 is especially worrying. Families who do not vaccinate their children (who do not belong to the Church of Christ, Scientist, and/or cannot obtain a medical exemption from vaccination) would lose their eligibility to the “Child Care Benefit and Child Care Rebate and the Family Tax Benefit Part A end of year supplement”. The loss of these benefits could cost a family approximately \$15,000 per child.

This move comes as part of what was a carefully orchestrated propaganda campaign “no jab, no play” which was launched in 2013 by the *Sunday Telegraph* and the *Daily Telegraph*. (See: <http://www.dailytelegraph.com.au/time-to-stop-keeping-kids-immune-from-jab/story-e6freuy9-1226635389528>)

There have been at least two petitions set up to counter this threat to non-vaccinating (or selectively-vaccinating) families.

<https://www.change.org/p/tony-abbott-stop-the-removal-of-the-childcare-rebate-and-child-care-benefits-to-those-who-choose-not-to-vaccinate-their-children>

<https://www.change.org/p/minister-scott-morrison-don-t-punish-parents-for-making-an-informed-choice-about-their-children-s-health-all-parents-deserve-to-make-an-uncoerced-choice>

In New Zealand, Prime Minister John Key recently reiterated that NZ would not follow Australia’s lead in linking children’s vaccinations to welfare payments and/or childcare access. http://www.nzherald.co.nz/nz/news/article.cfm?c_id=1&objectid=11432087

Such a policy was considered by the government following a report by the Health Select Committee in 2011, but was rejected on the grounds that it would infringe upon the human right to make a free and informed decision about medical treatment. (For details of this history, please

see www.noforcedvaccines.org/about and <http://www.noforcedvaccines.org/nz-government-vaccination-policy/vaccination-policy-timeline/>

This being said, there is a strong pro-vaccine lobby in NZ and within days of Prime Minister John Key ruling out a coercive vaccination policy in NZ, Northland GP Dr. O’Sullivan who was the winner of the 2014 “New Zealander of the Year” award was publicly advocating compulsory vaccination. (See: http://www.nzherald.co.nz/northern-advocate/news/article.cfm?c_id=1503450&objectid=11433540) He was also a guest on the current affairs TV programme Campbell Live.

Useful websites:

- <http://www.greenmedinfo.com/guide/vaccine-rights>
- <http://vactruth.com/>
- <http://www.nvic.org/>
- <http://truthaboutgardasil.org/>
- <http://www.vaccinationcouncil.org/>

(Some of these websites also have useful information about practical steps that parents who wish to vaccinate their children can take that may reduce the risk of adverse reactions and/or make it easier to access compensation should an adverse reaction occur.)

- <http://wavesnz.org.nz/> (NZ)
- www.noforcedvaccines.org (NZ-based)
- <http://avn.org.au/> and <http://www.vaccinationawareness.com.au/>. (Australia)
- <http://www.nvic.org/> (USA)

The NZ Ministry of Health, which has long acted as a de-facto PR company for the vaccination industry, has also been doing its best to quietly stigmatise and marginalise vaccine-refusal.

Most egregious among the Ministry of Health recent moves is marketing vaccines to children via “educational” videos which are obviously designed not only to elicit children’s agreement that vaccination is a good thing for them personally, but also a duty that they should undertake as being a responsible member of the community. (You can watch the videos and/or read the transcript at this link: <http://www.health.govt.nz/your-health/healthy-living/immunisation/immunisation-older-children>)

Parents who choose not to vaccinate are a small minority – the current vaccination rate in NZ is a record high 94%. If the pro-vaccine lobby is successful in inculcating in the general public the belief that people do not want to be vaccinated (or parents who choose not to vaccinate their children) are “irresponsible” or “free-loaders”, the social conditions in which a

coercive or even compulsory vaccination policy can be instituted will have been created.

If you take into account all the recent news from the USA (including the forced vaccination of children detailed elsewhere in this issue), the many bills before different US State governments, and the announcement by the Australian PM and the recent promotion of compulsory vaccination by Dr. O’Sullivan in NZ, it becomes clear that Big Pharma and its minions are obviously unhappy that there may be anyone refusing to be vaccinated – even if vaccine-refusers are only a small percentage of the population.

The huge financial resources (and, in many countries, political clout) of the pharmaceutical industry (which is quite happy to profit from products that they know will cause severe health problems or even death in some recipients), versus ordinary people, makes the current moves towards coercive vaccination policies something of a David versus Goliath battle.

I would suggest that if you want to maintain the current freedom that you have not to be vaccinated, if you do not wish to do so, that the time has come to take action.

- 1)** Inform yourself about vaccination. (Please see the list of useful websites starting here: <http://www.greenmedinfo.com/guide/vaccine-rights>)
- 2)** Share your knowledge in whatever forums you think are appropriate. (For example, you may want to comment at the end of relevant articles that are posted online, discuss the topic on Facebook and/or call talkback radio or write letters to the editor.)
- 3)** Advocate for fairness and for human rights. Ultimately, the vaccination issue comes down to the human right to make a free and informed choice about a medical treatment – and for parents’ rights to make that decision on behalf of their minor children.
- 4)** Recognise that people make different decisions about vaccination based on their access to information (and ability to analyse what they have read or viewed), personal (or family) experience of health and disease (including childhood illnesses and/or adverse reactions to vaccines). Ultimately, parents make whatever vaccination decision they think are in the best interests of their child/ren; it is good to acknowledge this.
- 5)** “Trolls” do exist in many online forums whose purpose appears to be to insult or denigrate anyone who disagrees with whatever agenda the troll appears to promote. It is always a good idea to stick to facts and to continue to exercise common courtesy. (Continued on Page 60)

Cannabis can kill cancer cells, says US government-funded research

By Payton Guion

The US government may be starting to officially recognize medicinal benefits of cannabis, as a government-funded research group has released a report claiming that plant can kill cancer cells.

The *Daily Caller* reported the National Institute on Drug Abuse has issued a report that recognizes potential medical benefits of cannabis, something the US government has rejected in its classification of cannabis (aka marijuana) as a Schedule I drug – along with heroin, LSD and ecstasy.

“Recent animal studies have shown that marijuana can kill certain cancer cells and reduce the size of others,” the NIDA report said. “Evidence from one animal study suggests that extracts from whole-plant marijuana can shrink one of the most serious types of brain tumours. Research in mice showed that these extracts, when used with radiation, increased the cancer-killing effects of the radiation.”

Of course, several US states allow the use of medicinal marijuana – and a few allow recreational use – but the federal government still bans marijuana use.

The Justice Department on Wednesday released a statement that while it will not stop states that allow medical marijuana from carrying out their programs, it will still go after marijuana users.

SOURCE: <http://www.independent.co.uk>

[Ed Note: Without undue fanfare, or even apologies for past indiscretions, mainstream media are giving increasing coverage to what amounts to one of the most important medical stories of recent times – e.g the emerging evidence that yet another, but extremely important, long sought after “cure” for cancer might be gaining the recognition it deserves.]

Statins Linked to Parkinson's

By Lucy Johnston
Sunday Express
March 8, 2015

Plans for the mass prescription of statins should be shelved after a study linked the drug to Parkinson's disease, an expert last night warned.

Dr Kailash Chand, deputy chairman of the British Medical Association, was speaking following research which found those who take the cholesterol-lowering drugs are more than twice as likely to develop Parkinson's disease in later life than those who do not.

A study last week showed statin use increases the risk of diabetes by 46 per cent. It has led to calls to end to the widespread use of the drugs.

The Parkinson's research carried out over 20 years, and involving nearly 16,000 people, suggests cholesterol may have a vital role in protecting the brain and nervous system.

The findings have alarmed experts who say if applied to the number of Britons deemed eligible for statins it could equate to 150,000 extra patients with Parkinson's, a central nervous system disorder affecting one in 350 mostly older people.

The work has also fuelled concerns that statins, now recommended for up to half the adult population over 50 by government drug policy adviser the National Institute for Health and Care Excellence, may be doing many patients more harm than good.

Doctors used to prescribe the drugs only to those who had a 30 per cent or greater risk of suffering a heart attack within a decade, but this was lowered to 20 per cent in 2005.

Antipsychotics are a major cause of death in the elderly

March 24, 2015

Antipsychotic drugs for dementia and Alzheimer's are far more dangerous than we've been told, and are a major cause of death in the elderly. The drugs also increase the risk for heart disease.

The newer generation of antipsychotics are the most dangerous, and the risk of premature death rises with the dosage, say researchers from the University of Michigan Health System.

There's a similar risk of death with valproic acid, the mood stabilizer, but not with antidepressants.

There's an "outsize risk of death" with the antipsychotics, and seems far higher than current drug warnings suggest. The US's drugs regulator, the Food and Drug Administration (FDA), has already issued a warning about the antipsychotics, but the extent of the risk may be under-estimated.

The drugs are prescribed to treat delusions, hallucina-

tions, agitation and aggression in people suffering from dementia and Alzheimer's. (They are also used in young people to treat "schizophrenia", autism and other "Mental health conditions - Ed.)

Iceland Decided To Do This With the Last McDonalds Meal EVER Sold!

February 4, 2015

By John Vibes, True Activist

After spending over a year in Iceland's National Museum, the last McDonalds meal sold in the country will now be going on display at the Bus Hostel in Reykjavik. The world-famous fast food chain shut down its Iceland locations in 2009, and even after all this time the last meal sold in the country has still not become rotten or moldy.

After the economic collapse, McDonalds failed to keep customers coming back in Iceland, and the company was forced to close their doors in the country. The final day that McDonalds was open in Iceland was October 31, 2009, and on that day a man named Hjortur Smarason purchased a meal as a souvenir. Smarason had no intention on actually eating it but wanted to hang onto it out of curiosity, and because he saw it as a piece of history.

At its new home at the Bus Hostel in Reykjavik, the burger and fries sit on display in front of a webcam, where people all over the world can watch its extremely slow decomposition.

ABOUT THE AUTHOR: John Vibes writes for True Activist and is an author, researcher and investigative journalist who takes a special interest in the counter culture and the drug war.

Autism 'Caused By MMR Using Human Fetal Cell Lines'

October 16, 2014

The explosion in autism has been caused by the introduction of human fetal cell lines in the manufacture of MMR (measles-mumps-rubella) vaccines, a major new study has concluded.

Before 1987, when the vaccines were

produced with animal cell lines, autism cases were relatively low. Today, it's been estimated that 1 in 50 children has autism.

Stem cell researcher Theresa Deisher and others say that the correlation between the sudden explosion in autism cases and the introduction of the new MMR vaccines is too strong to ignore - although, as the old maxim goes, correlation doesn't prove causation.

The 'change point' - when the numbers of autism cases rose sharply

- happened in the UK in 1987, just when the new MMR vaccine, using human fetal cells, was introduced. A similar correlation was seen around the same time in Denmark, while the autism change point in the US was 1980 to 1981 after the introduction of the new MeruvaxII and MMRII vaccines in 1979. Both vaccines used human fetal cells [as a culture medium for the rubella viruses in the vaccine - Ed] for the first time.

Radiotherapy for breast cancer raises risk for thyroid cancer

March 9, 2015

Women who have radiotherapy for breast cancer are far more likely to develop thyroid cancer within five years, a new study has discovered.

The risk should be explained to women before they begin treatment, and they should be regularly screened afterwards, say researchers from Columbia University in New York.

Radiation to the head, neck or chest is already a known risk factor for thyroid cancer, but the researchers were surprised by the number of women who developed it after treatment.

In an analysis of a database that recorded the number of patients with breast or thyroid cancer that were diagnosed between 1973 and 2011, the researchers discovered that 704,402 patients had breast cancer, 49,663 had thyroid cancer and 1,526 developed thyroid cancer after a breast cancer diagnosis.

Cannabis Oil Helps 3 Year Old Son Beat Cancer, Dad Says

By Mike Barrett
May 20, 2012

What would you do if your 3-year old son was stricken with brain cancer? Most parents wouldn't think twice about bringing their child to a mainstream doctor, only to undergo modern-day cancer "treatments" such as chemotherapy. This is what

one father, Mike Hyde, from Montana did when his three year old was diagnosed with brain cancer, but the father doesn't attribute his sons victory against cancer with the use of chemotherapy or any other mainstream treatment; the dad actually says cannabina oil is what made the young boy beat cancer. While the story isn't recent, it is one that everyone should hear about.

In May of 2010, radiologists at Community Medical Center in Missoula, Mont., discovered a stage 4 brain tumor in a 20-month-old boy named Cash. Shortly after the tumor was discovered, the toddler was brought to Primary Children's

Hospital in Salt Lake City, Utah, where he was placed in intensive care. It was recommended that Cash receive three cycles of chemotherapy, only to be followed by another 3 cycles of high-dose chemotherapy with stem cell rescue. The boy would also receive 'max amounts' of anti-nausea pharmaceutical medications.

"After his first round of high-dose chemo in August 2010, he no longer ate anything, and this went on through September. He was getting worse and worse...By the end of September he was so sick. He no longer was able to take feedings into his G-tube. His stomach lining was burnt from the chemotherapy, it was no longer processing anything – it was fried. I asked doctors if there was anything else we can give him and they said 'We're giving him max amounts of all anti-nausea medications we can give him.' They basically told me that this was as good as it was going to get. I told them that it was unacceptable," Hyde said.

The results of the chemotherapy were less than effective, as with most chemotherapy treatments, and the anti-nausea drug cocktail was also causing numerous side-effects. These results caused Hyde to pull his son off of the medication, and begin secretly administering .3 milligrams of cannabis oil through his sons's G-tube. Hyde says that once he began with the cannabis oil, his son started eating again and his quality of life completely changed for the better. The father was told that it was a miracle that his son began sitting up and laughing again.

"Doctors told us he was not going to make it. He was on life support for 40 days and was in a medically-induced coma. They said he would have brain damage and his lungs would fail. But I knew the medicine (cannabis oil) was in his body, and that helped him heal. It helped to rebuild his stomach lining, his liver and his lungs. He walked out of the ICU in mid-December. The nurses and doctors called him a 'Christmas miracle'," says Hyde

Was this one of the few cases where chemo ended up working? Perhaps, but the this mainstream treatment nearly killed the young boy in the process.

"It brought him to the edge of life, and if I wouldn't have stepped in when I did, he wouldn't be here right now," Hyde explained. "The marijuana oil was the best pain drug available for Cashy, as well as a neuro-protectant, antioxidant and antibacterial. I know it saves Cash's life." Seeing how marijuana oil helped the young boy to survive isn't surprising – the benefits of medical marijuana are vast, with the plant even able to fight cancer. The point of this story is to recognize that alternative solutions do exist which can be utilized. The marijuana and cancer relationship is very real; this is just one more of many cases that proves it.
